SENIOR SOFTWARE ENGINEER

Nowadays, I work as Full Stack Senior Developer in different technologies like Angular, NodeJS, Spring & Kotlin. Also, I've been acquiring new Cloud knowledge like AWS or Google Cloud in the last 3 years.

I'm interested in acquiring new programming skills, like knowing more deeply about Reactive programming, Artificial Intelligence & Blockchain, or different tools/techniques/new concepts about it, and also I would like to develop a great growth for my professional path as for the company I'm working for.
